

CASCOS C3.2 SYNCRO

TWO POST 'CLEAR FLOOR' LIFT WITH SYMMETRIC ARMS

Using traditional electro-mechanical design, the 'Syncro' range gives you everything you love about the classic Cascos 2 Post Lift, but with the added benefit of being completely baseless and providing a clear floor between the columns.

The genius in this is that you have a traditional 'screw' design in a baseless lift, without what some would see as the compromise of electro-hydraulic operation.

Each column has an independent motor, and perfect synchronisation is achieved through a simple PLC (Programmable Logic Controller). As with all Cascos lifts, bi-directional approach capability allows for the vehicle to be mounted in either direction on the lift without any fear of instability.

The ILC (Intelligent Lift Control) provides a total 'management' capability of the lift and valuable information for the owner/operator.

Useful features include:

- Service reminders and maintenance information
- Number of up/downs, both since new and from a reset
- User ID Key to prevent unauthorized use
- Ability to set pre-determined lift heights
- Visual and acoustic alerts for any pending faults or issues

ALSO AVAILABLE:
C3.2 Syncro Comfort Two Post Lift - with asymmetric arms.

C3.2 Syncro Premium Two Post Lift - with symmetric arms and a lower pad height of 85mm.

TECHNICAL SPECIFICATIONS

- Lifting Capacity: 3.2 Tonnes
- Lifting time: 45 seconds
- Weight: 590 kg
- Motor Power: 3.7 kW
